

ARC Commodity Factor Risk Model Monthly Report July 2023

The Asset Risk Company (ARC) Commodity Model is a cross-sectional commodity factor model. The model contains 50 of the most widely traded commodity products with approximately 1,200 futures in total over all maturities. All futures in the model have exposures to sectors, sub-sectors, and style factors such as basis, momentum, and open interest. The model is estimated daily with 21 years of history. It provides a framework for managing risk and investment decision making.

In this report, you will find:

- Performance of Sectors, Sub-Sectors and Style Factors
- Examples of Style Tilted Portfolios (Low Vol, Value, Momentum, Backwardation)
- Inflation prediction
- Risk Factor Decompositions of Popular Commodity Indexes (BCOM, GSCI)

The ARC Commodity Model is a powerful tool to help many constituencies in the financial industry, trading, and real economy. Some of the applications of the model are very straightforward, but some uses of the model are more nuanced. We recommend this short piece that provides details on both common and novel use cases for a commodity factor model: <https://www.assetriskcompany.com/whyfactor.html>. You can access our latest research at <https://www.assetriskcompany.com/library.html>.

Sectors and Factors Performance Report:

Table 1. Sectors and Subsectors Performance

Sectors	Month	YTD Perf	Historical Returns*	Volatility*
Agriculture	3.6%	-5.3%	14.2%	12.8%
Grain And Oilseed	4.2%	-7.6%	15.9%	15.0%
Lumber And Pulp	-6.3%	-26.2%	3.2%	52.6%
Proteins	2.3%	2.2%	13.8%	10.8%
Softs	4.2%	4.2%	6.0%	10.2%
Energy	8.0%	-4.7%	0.6%	16.6%
Biofuels	8.0%	-0.1%	14.1%	22.5%
Coal	8.0%	-6.4%	23.6%	25.8%
Crude Oil	8.3%	-1.4%	-2.9%	19.3%
Natural Gas	6.3%	-7.1%	1.4%	16.5%
Petrochemicals	8.0%	-5.9%	-3.9%	20.2%
Refined Products	10.5%	-6.6%	1.5%	21.7%
Metals	5.0%	-4.8%	10.4%	15.8%
Base	6.3%	-4.7%	10.0%	19.3%
Precious	4.0%	-3.1%	14.1%	18.6%

July was a strong month over the board for commodities with all sectors and sub-sectors up except Lumber & Pulp. Energy sectors performed well with Crude Oil up 8.3%, Natural Gas 6.3% and Refined Products 10.5%. However YTD all 3 sectors are still in the red. As a reminder, ARC sectors and sub-sectors returns are not estimated using a static configuration of commodity weightings. The returns come naturally from a

cross-sectional regression of the 1,200 assets in the model and therefore cover the entire term structure. For instance, Natural Gas has more than 120 maturities in the model. The model uses all of that information to derive sector and subsector returns and one can think of our sectors as risk weighted on the entire curve.

Table 2. Styles Performance

Factor	June 23	2023	5-year Return	5-year Volatility
Basis	-1.1%	-5.5%	-6.6%	5.5%
Open Interest	-0.6%	-1.4%	1.1%	4.2%
Momentum	1.3%	-0.7%	-0.5%	5.8%
ST Momentum	-0.4%	-6.9%	-7.7%	6.0%
Trading Activity	-0.3%	0.6%	-0.2%	2.4%
Volatility	1.8%	-1.2%	3.2%	9.0%
ST Volatility	0.1%	-0.9%	1.0%	8.3%

Momentum and Volatility had a strong month. Remember the factor returns here come from large portfolios of what are known as “factor replicating” portfolios. The factor replicating portfolios are not a practical way to trade and consist of positions (both long and short) in most of the instruments in the model’s universe. We provide a much more parsimonious factor-tilted (long only) portfolio later in this analysis.

Style Tilted Portfolios Performance Report:

BCOM commodity index and GSCI Index are up again this month 6.2% and 10.7% with BCOM still negative for the year and GSCI up YTD 2.4%. After a tough 2022, the Value tilted portfolio came back with a vengeance, with a 25% return in the last 2 months. We define commodity Values by scoring z-score of low momentum futures. So these are typically futures that underperformed over the last year. Both Value and Low Volatility futures tilted portfolios are worth considering as a tilt to a strategy. Over 5 years, Sharpe Ratio for the Low Vol portfolio is 0.9 and 0.6 for Value (Low Momentum) vs 0.3 for

Contact info@assetriskcompany.com for more information, or visit us at www.assetriskcompany.com

BCOM. Based on 22 years of data we clearly see some real premia for Low Vol and Low Momentum Futures.

Table 3. Factor Tilted Portfolios and BCOM Performance

	Value	Momentum	Low Vol	Backwardation	BCOM
June 2023	13.4%	3.8%	3.1%	8.3%	6.3%
2023	5.1%	-4.1%	0.1%	-6.2%	-2.0%
Annualized*	11.2%	7.5%	9.0%	7.2%	4.7%
Volatility*	17.7%	17.4%	9.8%	17.3%	16.2%

*Annualized 5 years

Inflation:

We find that the ARC Commodity Model is a good predictor of breakout moves in the headline number, both in bouts of inflation and deflation. For the upcoming July inflation number we forecast a CPI of 0.4%-0.5% and year on year inflation increasing to 3.6%.

Factor Correlations:

Long term correlations between sectors and style factors are very low. The model is able to separate sector allocation risk from style risk providing key insights in the real key drivers of risk and performance of a portfolio.

Table 6. Factor Correlations

Correlations	Agriculture	Energy	Metals	Basis	Open Interest	Momentum	ST Momentum	Trading Activity	Volatility	ST Volatility
Agriculture	1.00	0.33	0.25	0.03	(0.03)	(0.05)	(0.19)	0.02	0.23	0.06
Energy	0.44	1.00	0.31	(0.07)	0.37	(0.28)	(0.18)	(0.16)	(0.01)	0.25
Metals	0.37	0.29	1.00	(0.20)	0.09	0.00	(0.09)	(0.07)	(0.02)	0.16
Basis	(0.25)	(0.58)	(0.36)	1.00	(0.22)	(0.08)	(0.01)	0.23	0.07	(0.09)
Open Interest	0.30	0.38	(0.15)	(0.35)	1.00	(0.39)	(0.04)	(0.69)	(0.30)	0.12
Momentum	(0.03)	(0.35)	0.10	0.37	(0.34)	1.00	0.22	0.24	0.43	(0.26)
ST Momentum	(0.10)	(0.08)	0.08	(0.13)	0.28	0.22	1.00	0.07	0.03	0.02
Trading Activity	(0.22)	(0.23)	0.16	0.30	(0.74)	0.35	(0.04)	1.00	0.15	(0.02)
Volatility	0.06	(0.15)	(0.05)	0.14	(0.46)	0.18	(0.57)	0.22	1.00	(0.68)
ST Volatility	0.17	0.38	0.54	(0.25)	0.16	0.07	0.54	0.11	(0.72)	1.00

1 yr correlations on the right (above the diagonal), 30 days on left (below the diagonal).

Commodity Indices Risk Decomposition

Energy is the largest sector in GSCI but the smallest in BCOM. Both indices have high z-scores with respect to Open Interest reflecting the fact that the indices' constituents are weighted more heavily on the front month contract.

Table7. Factor Exposures

Factors Exposures	BCOM	GSCI
Agriculture	0.33	0.25
Energy	0.31	0.59
Metals	0.36	0.16
Basis	-0.07	-0.09
Open Interest	1.86	2.18
Momentum	0.04	-0.34
ST Momentum	-0.05	0.43
Trading Activity	0.47	0.36
Volatility	0.51	0.72
ST Volatility	0.33	0.31

Exposures, z-scores for BCOM and GSCI as of 7/31/2023

We use a 6 month half life for this risk decomposition so the model is fairly reactive to market conditions. Despite different sector allocations, both indices have similar risk and exposures to styles. If your portfolio is long/short you want to see if you have systematic exposures or whether idiosyncratic risk predominates. For long only managers, you want to find your exposures versus your benchmark. As shown above in the correlation tables, sector correlations with style factors are relatively small. The model is able to separate risk due to sector allocation and styles risk. All risk is not equal. Systematic risk can display non normal behavior when compared to specific or idiosyncratic risk.

Both types of risks are driven by fluctuation, but systematic risk is driven by the “crowd” expressing some thematic bet. The systematic risk is related to market risk.

Table 8. Risk Attribution of BCOM and GSCI

Index	BCOM	GSCI
Total Risk	15.0%	17.8%
Agriculture	2.0%	1.1%
Energy	3.1%	7.3%
Metals	4.1%	1.1%
Basis	0.1%	0.2%
Open Interest	4.1%	5.2%
Momentum	0.0%	0.6%
ST Momentum	0.0%	-0.1%
Trading Activity	-0.2%	-0.2%
Volatility	1.2%	1.9%
ST Volatility	0.1%	0.0%
Specific Risk	4.2%	4.8%

Ex-Ante Annual Volatility Decomposition for BCOM and GSCI as of 7/31/2023

Conclusion:

In this report, we have shown the factor performance driving the commodity markets. Using the ARC Commodity model, style tilted portfolios have shown great performance and seem to be suitable benchmarks for active managers to track. We then conducted an analysis into the risk dynamics of two major commodity indices. The view of commodities as diversifiers is quite accurate. All of this was possible with the ARC model. The model enables the user to look at their book or portfolio and how it fits into their thesis as well as how it fits in the broader economic landscape.
