

## **ARC Commodity Factor Risk Model Monthly Report November 2023**

The Asset Risk Company (ARC) Commodity Model is a cross-sectional commodity factor model. The model contains 50 of the most widely traded commodity products with approximately 1,200 futures in total over all maturities. All futures in the model have exposures to sectors, sub-sectors, and style factors such as basis, momentum, and open interest. The model is estimated daily with 23 years of history. It provides a framework for managing risk and investment decision making.

In this report, you will find:

- Performance of Sectors, Sub-Sectors and Style Factors
- Examples of Style Tilted Portfolios (Low Vol, Value, Momentum, Backwardation)
- Risk Factor Decompositions of Popular Commodity Indexes (BCOM, GSCI)
- Inflation prediction

The ARC Commodity Model is a powerful tool to help many constituencies in the financial industry, trading, and real economy. Some of the applications of the model are very straightforward, but some uses of the model are more nuanced. We recommend this short piece that provides details on both common and novel use cases for a commodity factor model: <https://www.assetriskcompany.com/whyfactor.html>. Sectors	Nov. 23	YTD	5-year Return	5-year Volatility
<b>Agriculture</b>	<b>0.5%</b>	<b>-7.0%</b>	<b>14.8%</b>	<b>12.9%</b>
Grain And Oilseed	0.9%	-13.2%	15.7%	15.2%
Lumber And Pulp	3.9%	-22.2%	9.7%	52.2%
Proteins	-5.9%	-9.2%	10.0%	11.3%
Softs	2.2%	28.1%	10.3%	14.0%
<b>Energy</b>	<b>-2.4%</b>	<b>-5.7%</b>	<b>2.4%</b>	<b>16.0%</b>
Biofuels	-2.4%	-1.1%	15.5%	22.5%
Coal	-2.4%	-7.3%	23.1%	25.7%
Crude Oil	-3.0%	-4.2%	-1.4%	18.9%
Natural Gas	-2.0%	-5.3%	3.2%	16.4%
Petrochemicals	-2.4%	-6.8%	-1.6%	18.8%
Refined Products	-2.2%	-10.0%	4.0%	20.7%
<b>Metals</b>	<b>1.1%</b>	<b>-10.4%</b>	<b>9.7%</b>	<b>15.9%</b>
Base	2.7%	-10.1%	9.6%	19.6%
Precious	-0.1%	-8.9%	12.7%	18.7%

We are still on a downward trend with commodities. Year to date, all 3 major sectors are still negative. Energy in particular was down 2.4% in November, with Crude Oil and Natural Gas down 3% and 2%, respectively. Base Metals recovered this month but are still down 10% year to date. Precious Metals were flat this month but still down 9% year to date. In the Agriculture sector, Grains & Oilseeds and Softs were up this month. As a reminder, ARC sectors and sub-sectors returns are not estimated using a static configuration of commodity weightings. The returns come naturally from a

cross-sectional regression of the 1,200 assets in the model and therefore cover the entire term structure. For instance, Natural Gas has more than 120 maturities in the model. The model uses all of that information to derive sector and subsector returns and one can think of our sectors as risk weighted on the entire curve.

**Table 2. Styles Performance**

<b>Factor</b>	<b>Nov. 2023</b>	<b>YTD</b>	<b>5 Year Return</b>	<b>5 Year Volatility</b>
<b>Basis</b>	<b>-0.5%</b>	<b>-8.0%</b>	<b>-6.0%</b>	<b>5.3%</b>
<b>Open Interest</b>	<b>-1.2%</b>	<b>-2.0%</b>	<b>1.5%</b>	<b>4.1%</b>
<b>Momentum</b>	<b>1.3%</b>	<b>1.6%</b>	<b>0.8%</b>	<b>5.7%</b>
<b>ST Momentum</b>	<b>0.7%</b>	<b>-5.9%</b>	<b>-7.5%</b>	<b>5.8%</b>
<b>Trading Activity</b>	<b>0.7%</b>	<b>1.6%</b>	<b>-0.3%</b>	<b>2.5%</b>

<b>ST Volatility</b>	<b>1.3%</b>	<b>1.1%</b>	<b>1.5%</b>	<b>8.2%</b>

Despite a tough year for commodities and the latest events in the Middle East, the Volatility factor is down again this month and year to date (-5.1%). The 5 year annualized return is positive. Both Momentum factors were up in November. Remember the factor returns here come from large portfolios of what are known as “factor replicating” portfolios. The factor replicating portfolios are not a practical way to trade and consist of positions (both long and short) in most of the instruments in the model’s universe. We provide a much more parsimonious factor-tilted (long only) portfolio later in this analysis.

### **Style Tilted Portfolios Performance Report:**

BCOM commodity index was down 2.3% in November and the GSCI Index was down 3.6%. Year to date, GSCI is down 1%, while BCOM is down 5.4%. Value (Low Momentum) and Low Volatility are both positive year to date (5.9% and 3.2% respectively). Both Value and Low Volatility portfolios are worth considering as a tilt to an

existing strategy. Based on a variety of studies coupled with 23 years of data we clearly see some real premia for Low Vol and Low Momentum futures. Our thesis is that the market has lacked a good lens with which to view these effects. The ARC Commodity model and approach illuminates this market feature.

## Factor Correlations:

Long term correlations between sectors and style factors are very low. The model is able to separate sector allocation risk from style risk providing key insights in the real key drivers of risk and performance of a portfolio.

## Commodity Indices Risk Decomposition

Energy is the largest sector in GSCI but the smallest in BCOM. Both indices have high z-scores with respect to Open Interest reflecting the fact that the indices' constituents are weighted more heavily on the front month contract.

We use a 6 month half life for this risk decomposition so the model is fairly reactive to market conditions. Despite different sector allocations, both indices have similar risk and exposures to styles. A portfolio which is long/short would be evaluated on the breakout between systematic exposures and whether idiosyncratic risk. Long only managers will want to find their exposures relative to their benchmark. As shown above in the correlation tables, sector correlations with style factors are relatively small. The model is able to separate risk due to sector allocation and styles risk. All risk is not equal. Systematic risk can display non normal behavior when compared to specific or idiosyncratic risk. Both types of risks are driven by fluctuation, but systematic risk is

driven by the “crowd” expressing some thematic bet. The systematic risk is related to market risk.

## **Inflation:**

Empirical testing finds that the ARC Commodity Model is an excellent predictor of breakout moves in the headline number, both in bouts of inflation and deflation. For November, we predict a higher CPI level, but the year on year change (Inflation) will remain unchanged compared to October. Reach out to [info@assetriskcompany.com](mailto:info@assetriskcompany.com) for our estimate.

## **Conclusion:**

In this report, we have shown the factor performance driving the commodity markets. Using the ARC Commodity model, style tilted portfolios have shown great performance and seem to be suitable benchmarks for active managers to track. We then conducted an analysis into the risk dynamics of two major commodity indices. The view of commodities as diversifiers is quite accurate. All of this was possible with the ARC model. The model enables the user to look at their book or portfolio and how it fits into their thesis as well as how it fits in the broader economic landscape.
